

Preface

The vigorous Trees in ancient Egypt were relatively rare, and fineness lumber had to be imported from abroad'. Native species included Acacia, Tamarisk, Date and Doum palms, Persea, Sycamore-fig (*Ficus sycamorus*) and others.

Thesis Classification & Divisions: The thesis title is "The Daily and Religious Role of the Trees from Ancient Egypt till 10th Century A.D. ", it is composed of five main sections respectively:

1. The Daily Role of the Trees in Ancient Egypt till the end of the 10th Century A.D.
2. The Religious Role of the Trees in Ancient Egypt till the end of the 10th Century A.D.
3. The Tables for different kinds of Trees in Ancient Egypt till the end of the 10th Century A.D.
4. Analytical Study for the data collected.
5. Conclusions of the Study.

Methodology: The thesis depended on the framework of the random sample of the trees found in Ancient Egypt till the 10th Century A.D. The researcher tried to collect various shapes and types for the trees through prolonged time span which extended from the beginning of the ancient Egyptian history till the end of the 10th Century A.D.

Purpose: the main aim is trying to demonstrate the trees which appeared in Egypt from the ancient times till the 10th Century A.D. exploring their functions, features and roles through these periods of times. nevertheless, attempting to exemplify the development of trees through all these ages.
